Section D - Comprehension Open-ended (3 x 2 marks)

Read the following passage carefully. Your answers must be based on the passage.

There are about one hundred and sixty-two different types of owls in the world today. Their habitats can be found in big trees in the rainforests.

Many owls have large heads and thick feathers that reduce the sounds their wings make while flying. On an owl's head is a pair of big, round eyes that ~~face~~ faces forward. Other birds have their eyes by the sides. The eye position gives the owl its binocular eyesight. This enables the owl to spot its prey from a distance. An owl also has a sharp sense of hearing which helps it when it is hunting for food.

Owls are nocturnal birds. Nocturnal birds sleep in the day and hunt actively at night. Usually, owls wait for their prey to appear. Once they spot a prey, they swoop down quickly to snatch it off the ground. Owls are carnivorous. They feed on mice, insects, frogs and birds. There are not many animals which eat owls.
