Comprehension 1 (10 marks)

Read the passage carefully and answer the questions that follow.

Galileo Galilei was born in 1564. He was born in the town of Pisa, in what is now Italy. When he was 20 years old, he was studying in Pisa His father wanted him to be a docto Galileo was bored with school. The only subject he really liked was Mathematics So, the court mathematician offered to tutor him privately. Galileo's tutor said he could become a qualified mathematician. Galileo's father was disappointed, but he agreed.

Galileo began experimenting with different things because he needed to earn money. He tried to come up with an invention that he could sell for money He had some success with one invention. It was like a compass that could be used to measure land. One day, he heard that a Dutch inventor had invented something called a spyglass. The inventor was trying to keep it a secret. Galileo decided to work on one of his own. Within 24 hours, he had invented a telescope. It could magnify things to make them appear ten times larger than real life.

One night, he pointed his telescope toward the sky. He made his first of many space observations. Everyone thought the moon was smooth. Galileo saw that it was not. The moon was covered in bumps and craters. As technology has improved, Galileo and many others have made improvements on the telescope. Today, the telescope is a wonderful device that allows us to see objects far, far away.

Comprehension 2 (10 marks)

Read the passage below and answer the questions that follow it.

Bats have an interesting way of looking at their world. Bats are nocturnal, which means they are most active at night. They do not use their eyes but their ears to find their way around in the dark.

Bats use ultrasound, to sense direction and distance. It also helps them avoid obstacles in their paths as they fly in the dark. This is known as echolocation.

Echolocation is just like echoes in a large, empty room. Bats move air across their vocal cords just as people do when they speak or yell. Some bats make the sound come out of their mouths while others out of their noses. Bats make a very high pitch sound. This means the sound waves move very quickly. The sound waves bounce off any objects, creating an echo to the bat.

A bat's ears often appear quite large compared to the size of its head. Hence, the bat can tell very precisely where an object is. The echo from a moving object is different from a still object. The sound is louder if the object is coming closer and softer if it is going away. This is important because it helps the bat find insects to eat.

The process of echolocation is very natural for the bat that it does not care that it is "as blind as a bat." It can see with its ears!

Adapted from They See With Their Ears

Sub-Total: ____

www.TestPapersFree.com

Downloaded from SingaKids.com

According to the paragraphs 1 to 3, which **three statements** clearly describe bats. **Tick (√) your three chosen answers.** An example has been done for you. [3m]

Characteristics from the paragraphs 1 to 3		Bats
Example	They have an interesting way of looking at their world.	✓
34	They use ultrasound to find their way.	
	They make a low pitch sound.	
	They are more active in the night than in the day.	
	They only use their eyes to find their way around.	
	The sounds come out of their mouths or noses.	

35 Fill in each blank with **ONE** suitable word.

Bats use echolocation to help determine _____ [1m] and _____ [1m]

36 Which word has the same meaning as 'hindrances' in paragraph 2?
Circle either (A) or (B). [1m]

It also helps them avoid obstacles in their **paths** as they fly in the dark.
(A) (B)

www.TestPapersFree.com

Downloaded from SingaKids.com

For Q37 to Q39, read each statement and tick √ "True" or "False". Refer to paragraph 4 to help you. An example has been done for you. [3m]

	Statement	True	False
Example	The echo from a moving object and a still object is different.	✓	
37	Bats use echolocation to find food.		
38	Bats can accurately tell where an object is.		
39	The echo is louder if the object is going away and softer if it is coming closer.		

40 Tick (✓) your chosen answer.

From the last sentence, we can conclude that bats have a good sense of _____. [1m]

	sight
	taste
	hearing
