LEVEL:	Sec 3 Express	**DATE:**	9 May 2019
CLASS:	Sec 3/2	**DURATION:**	2 hours 30 minutes (for Booklets **A** and **B**)

Additional materials provided: 1 sheet of OAS paper

INSTRUCTIONS TO CANDIDATES
Do not open this booklet until you are told to do so.
Write your NAME and INDEX NUMBER at the top of this page and on the OAS paper.
Shade your index number on the OAS paper.

This paper consists of 3 sections.

BOOKLET A:
SECTION A – MULTIPLE CHOICE QUESTIONS (30 marks)
There are 30 questions in this section. Answer **all** questions. For each question, there are four possible answers A, B, C and D. **Choose the correct answer and record your choice in soft or 2B pencil on the OAS paper provided. DO NOT fold or bend the OAS paper.**

BOOKLET B:
SECTION B – SHORT STRUCTURED QUESTIONS (40 marks)
Answer **all** questions. Write your answers in the spaces provided on the question paper.

SECTION C – FREE RESPONSE QUESTIONS (30 marks)
Answer all **three** questions, the last question is in the form of an **EITHER / OR**. Write your answers in the spaces provided on the question paper.

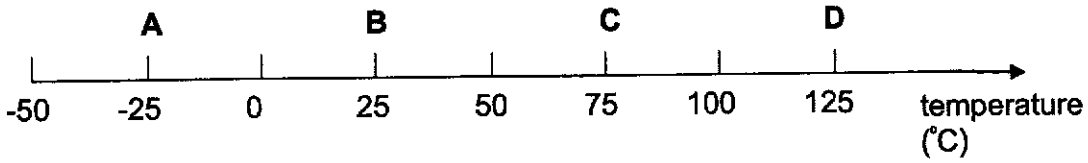

At the end of the examination, hand in your OAS paper, Booklets **A** and **B** separately.
A copy of the Periodic Table is printed on the last page of Booklet **B**.

This Question Paper consists of 12 printed pages including this page.
Section A - Multiple Choice Questions (30 marks)

More papers at www.testpapersfree.com
Downloaded from SingaKids.com

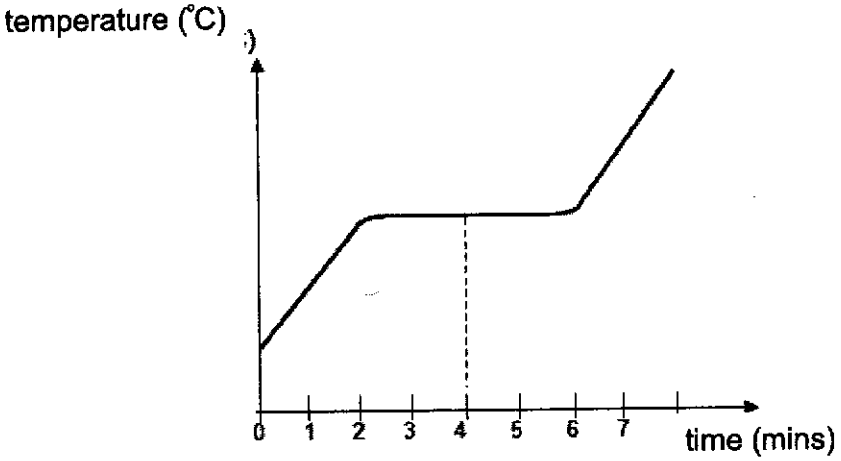

There are **thirty** questions in this section. Answer **ALL** questions. For each question, there are four possible answers, **A**, **B**, **C** and **D**. Choose the **one** you consider correct and record your choice on the OAS in soft pencil.

1 Bromine has a melting point of -2 °C and a boiling point of 59 °C.

At which temperature is bromine a liquid?

2 The figure below shows a graph obtained by heating solid **Z** in air.

Which statement is true about the particles of **Z** at the fourth minute?

A All the particles are arranged closely.

B All the particles move freely in all directions.

C Some particles are gaining enough energy to overcome attractive forces to be able to slide past each other.

D Some particles slide past each other while some particles move freely in all directions.

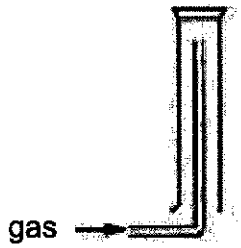

3 The table gives the density and solubility in water of four gases.

More papers at www.testpapersfree.com

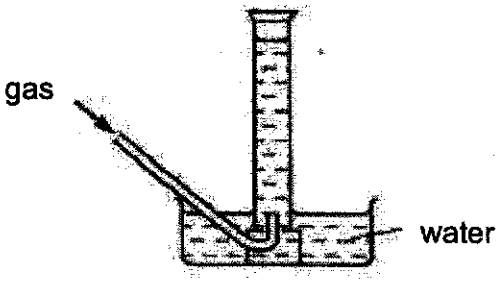

Downloaded from SingaKids.com

gas	density	solubility in water
1	denser than air	insoluble
2	denser than air	soluble
3	less than air	insoluble
4	less than air	soluble

Two methods of collection of gases are shown below.

upward delivery

displacement of water

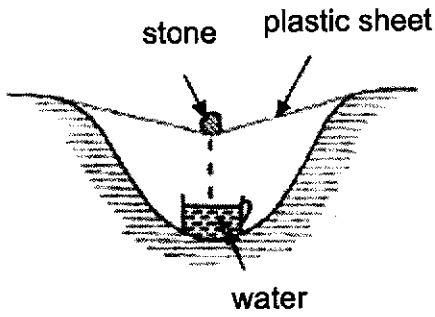

Which row correctly shows whether each of these methods could or could not be used to collect each gas?

		method of collection	
	gas	upward delivery	displacement of water
A	1	no	no
B	2	no	yes
C	3	yes	yes
D	4	yes	yes

4 A desert survival kit contains a plastic sheet and a cup. A hole is dug in the ground and the sheet is stretched over the hole whilst a stone is placed in the middle of the

More papers at www.testpapersfree.com
Downloaded from SingaKids.com

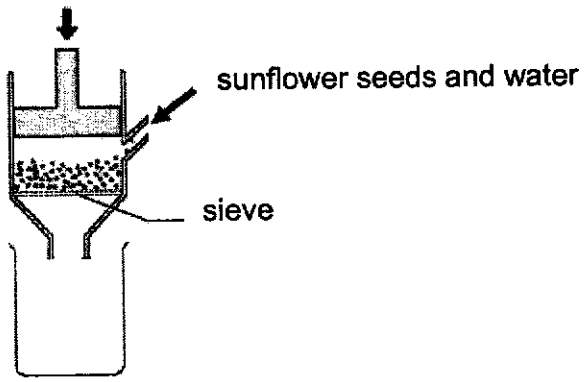

sheet as shown below.

In the heat of the sun, moisture from the ground collects on the underside of the sheet, runs down towards the stone and drips into the cup. The overall process that takes place is an example of .....

A condensation
B distillation
C evaporation
D filtration

5 A student attempted to extract oil from sunflower seeds using a home-made oil press shown in the diagram below. The sunflower seeds were first crushed and then water was added to the oil press to improve the extraction efficiency. A sieve was used in the oil press to prevent the sunflower seeds from dropping into the empty beaker.

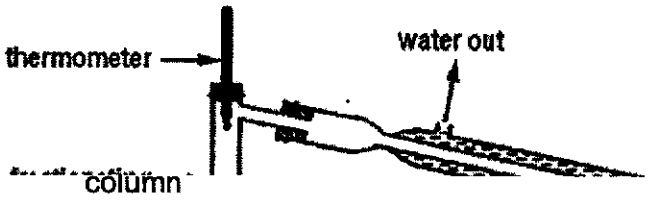

Which method can be used to recover the sunflower oil from the contents in the beaker?

A crystallisation
B filtration
C fractional distillation
D use a separating funnel

6 The apparatus shown is used to distill a mixture of ethanol and water. The boiling point of ethanol is 78 °C.

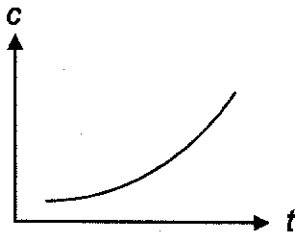

More papers at www.testpapersfree.com
Downloaded from SingaKids.com

5

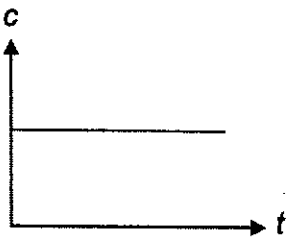

Which graph below shows how the concentration of ethanol (c) in the conical flask changes as time (t) increases?

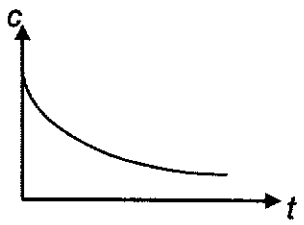

A

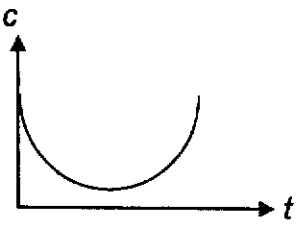

B

C

D

7 Which group of substances contains an element, compound and mixture?

A carbon, zinc, silver chloride

More papers at www.testpapersfree.com
Downloaded from SingaKids.com

B seawater, carbon dioxide, limestone

C sodium chloride, ammonia, graphite

D water, gold, crude oil

8 Which substance **W**, **X**, **Y** or **Z** is likely to be an element?

A **W** burns in air to form carbon dioxide and water.

B **X** changes colour and loses oxygen rapidly on gentle heating.

C On heating **Y**, a gas is produced, leaving a solid residue.

D **Z** conducts electricity as a solid and when molten.

9 The diagrams below can be used to illustrate the substances **I** to **IV**.

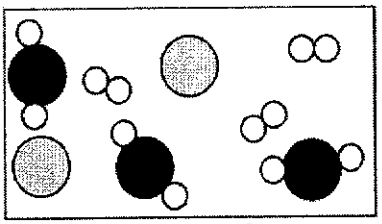

diagram **I**

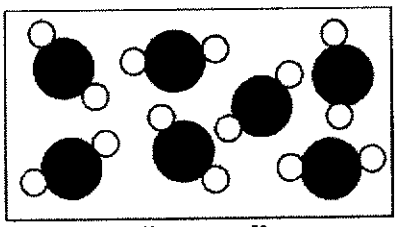

diagram **II**

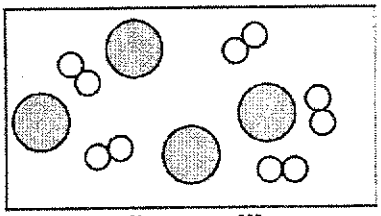

diagram **III**

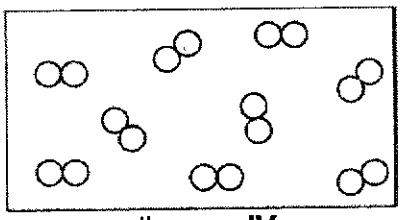

diagram **IV**

What is the correct order of the diagrams?

	a mixture of elements and compounds	a mixture of elements	molecules of an element	molecules of a compound
A	**I**	**III**	**IV**	**II**
B	**I**	**III**	**II**	**IV**
C	**III**	**I**	**IV**	**II**
D	**III**	**I**	**II**	**IV**

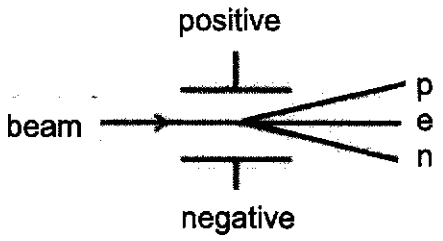

10 A beam of particles containing proton (p), neutron (n) and electron (e) is passed between charged plates.

Which diagram shows how the particles are affected by the plates?

A

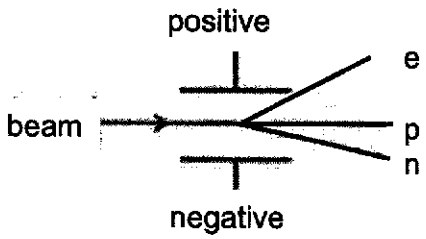

B

C

D

11 Carbon has isotopes with relative atomic masses of 12, 13 and 14.

If ethane, C_2H_6, is formed from these carbon isotopes, which is not a possible relative molecular mass of ethane?

A 30 **B** 32

C 34 **D** 35

12 What is the relative formula mass of a phosphide ion, P^{3-}?

A 15 **B** 18

C 31 **D** 34

13 Which statement correctly describes the formation of sodium sulfide?

A One sulfur atom loses two electrons to two sodium atoms.

B Two sodium atoms lose an electron each to a sulfur atom.

More papers at www.testpapersfree.com

Downloaded from SingaKids.com

C One sulfur atom shares two electrons with two sodium atoms.

D Two sodium atoms share an electron each with a sulfur atom.

14 Which pair of ions contains the same number of electrons?

A F^- and Cl^-

B Mg^{2+} and N^{3-}

C Be^{2+} and O^{2-}

D Na^+ and Ca^{2+}

15 Four elements **W**, **X**, **Y** and **Z** have consecutive proton numbers. **X** is a noble gas.

Which statement is true?

A The ion of **W** will have the same electronic configuration as the ion of **Z**.

B **W** will form an ion of +1 charge while **Y** will form an ion of –1 charge.

C **Y** and **Z** will combine to form a covalent compound.

D **Y** has more valence electrons than **X**.

16 An ion X^{2+} has m nucleons and n electrons.

What does atom **X** contain?

	number of protons	number of neutrons	number of electrons
A	n – 2	m – n	n – 2
B	n – 2	m – (n – 2)	n + 2
C	n + 2	m – (n + 2)	n – 2
D	n + 2	m – (n + 2)	n + 2

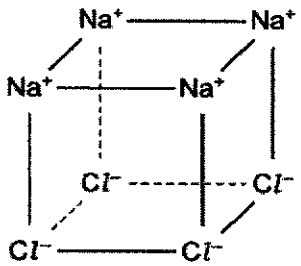

17 Which diagram correctly shows the arrangement of the ions in solid sodium chloride?

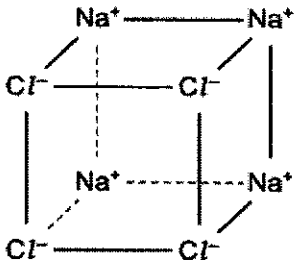

A **B**

More papers at www.testpapersfree.com

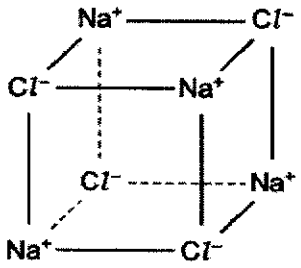

Downloaded from SingaKids.com

9

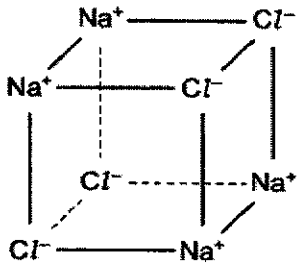

C

D

18 Magnesium silicate, $MgSiO_3$, is often found as an odourless finely divided powder.

What is the chemical formula of sodium silicate?

A $NaSiO_3$ **B** $Na(SiO_3)_2$

C Na_2SiO_3 **D** $Na_2Si_2O_3$

19 Which metal has the strongest metallic bond?

A aluminium **B** magnesium

C potassium **D** sodium

20 Substance **X** has a melting point higher than 500 °C. It conducts electricity when in solid and molten states.

What is **X**?

A copper **B** diamond

C mercury **D** sodium chloride

21 Which ionic equation is correct for the reaction shown below?

$$2\ Na\ (s) + Ca(NO_3)_2\ (aq) \rightarrow 2\ NaNO_3\ (aq) + Ca\ (s)$$

A $2\ Na\ (s) + 2\ NO_3^-\ (aq) \rightarrow 2\ NaNO_3\ (aq)$

More papers at www.testpapersfree.com
Downloaded from SingaKids.com

B $2\ Na\ (s) + Ca^{2+}\ (aq) \rightarrow 2\ Na^{+}\ (aq) + Ca\ (s)$

C $2\ Na\ (s) + Ca^{2+}\ (aq) + 2\ NO_3^{-}\ (aq) \rightarrow 2\ Na^{+}\ (aq) + 2\ NO_3^{-}\ (aq) + Ca\ (s)$

D $Ca^{2+}\ (aq) + 2\ NO_3^{-}\ (aq) \rightarrow 2\ NO_3^{-}\ (aq) + Ca\ (s)$

22 Which is the correct definition of relative atomic mass?

A The relative atomic mass of any atom is the number of times the mass of one atom of an element is greater than $\frac{1}{12}$ of the mass of one carbon-12 atom.

B The relative atomic mass of any atom is the number of times the mass of one molecule of an element is greater than $\frac{1}{12}$ of the mass of one carbon-12 atom.

C The relative atomic mass of any atom is the number of times the mass of one atom of a substance is greater than $\frac{1}{12}$ of the mass of one carbon-12 atom.

D The relative atomic mass of any atom is the number of times the mass of one molecule of a substance is greater than $\frac{1}{12}$ of the mass of one carbon-12 atom.

23 Which substance has the greatest number of atoms?

A 33 g of CO_2

B 2 g of He

C 27 g of F_2

D 40 g of MgO

24 Element **Q** forms the nitrate QNO_3 and has an M_r of 101.

What is the M_r of an oxide of **Q**?

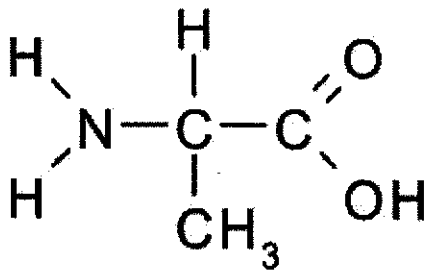

A 55 **B** 71

More papers at www.testpapersfree.com

Downloaded from SingaKids.com

C 94 **D** 110

25 Alanine is an amino acid which is used in the synthesis of proteins. Its structure is shown below.

Which element in alanine is present in the highest percentage by mass?

A carbon **B** hydrogen

C nitrogen **D** oxygen

26 The chemical formulae of two substances, **W** and **X**, are given.

substance	chemical formula
W	$NaAlSi_3O_8$
X	$CaAl_2Si_2O_8$

Which statements are correct?

I **W** and **X** contain the same percentage by mass of oxygen.
II **W** and **X** contain the same number of atoms in 1 mole of the substance.
III **X** has higher M_r than **W**.

A **I** and **II** only **B** **I** and **III** only

C **II** and **III** only **D** **I, II** and **III**

27 What is the concentration of Fe^{3+} ions in 0.01 mol/dm^3 of aqueous $Fe_2(SO_4)_3$?

A 0.01 g/dm^3 **B** 0.02 g/dm^3

C 1.12 g/dm^3 **D** 1.68 g/dm^3

PartnerInLearning
More papers at www.testpapersfree.com

Downloaded from SingaKids.com

28 A 500 cm^3 of potassium chloride solution at 0.250 mol/dm^3 was left in the open for two days. At the end of the second day, the concentration of the solution was determined to be 0.265 mol/dm^3.

What is the volume of water that had evaporated?

A 12 cm^3 **B** 14 cm^3

C 24 cm^3 **D** 28 cm^3

29 One of the reactions in the manufacture of sulfuric acid is the reaction between sulfur dioxide and oxygen to form sulfur trioxide.

$$2\ SO_2 + O_2 \rightarrow 2\ SO_3$$

What is the mass of sulfur trioxide that can be obtained by reacting 72 dm^3 of sulfur dioxide in excess oxygen?

A 72 g **B** 80 g

C 160 g **D** 240 g

30 Calcium reacts with excess nitric acid, according to the equation shown below.

$$Ca + 2\ HNO_3 \rightarrow Ca(NO_3)_2 + H_2$$

When 6 g of calcium was completely reacted, only 15 g of calcium nitrate was obtained from crystallisation.

What is the percentage yield of calcium nitrate?

A 20% **B** 39%

C 40% **D** 61%

SECTION C: FREE-RESPONSE QUESTIONS [30 MARKS]

Answer **all** the questions in the spaces provided. The last question is in the form of an EITHER / OR and only one of the alternatives should be attempted.

1 Carbon is the name derived from Latin: carbo "coal". It is non-metallic and has four valence electrons available to form covalent chemical bonds. Three isotopes occur naturally, ^{12}C and ^{13}C being stable, while ^{14}C is not.

Carbon is the 15th most abundant element in the Earth's crust, and the fourth most abundant element in the universe by mass after hydrogen, helium, and oxygen. Carbon's abundance, its unique diversity of organic compounds, and its unusual ability to form polymers at the temperatures commonly encountered on Earth enables this element to serve as a common element of all known life. It is the second most abundant element in the human body by mass (about 18.5%) after oxygen.

Allotropy is the existence of an element in two or more forms. Allotropes differ in the arrangement of atoms in crystalline solids or in the occurrence of molecules that contain different number of atoms. The existence of different crystalline forms of an element is the same phenomenon that in the case of compounds is called polymorphism. Diamond, graphite and graphene are some of the carbon allotropes.

The physical properties of carbon vary widely with the allotropic form. For example, graphite is opaque and black while diamond is highly transparent. Graphite is soft enough to write on paper, while diamond is the hardest naturally occurring material known. Graphite is a good electrical conductor while diamond has a low electrical conductivity. As graphene is the world's strongest material, it is used to enhance the strength of other materials. Such graphene enhanced composite materials find their uses in aerospace, building materials, mobile devices and other applications.

The structures of the three allotropes of carbon are shown in Fig 1.1.

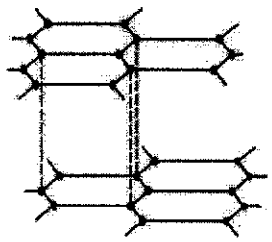

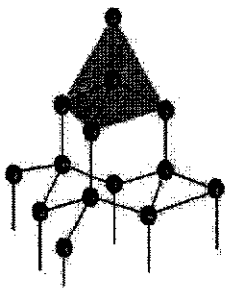

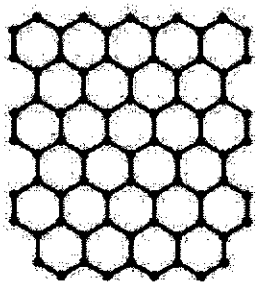

graphite	diamond	graphene
		

Fig. 1.1

PartnerInLearning
More papers at www.testpapersfree.com
Downloaded from SingaKids.com

When carbon compounds dissolve in water, they break apart into molecules, but not individual atoms. Water is a polar solvent, but covalent compounds are usually nonpolar. This means covalent compounds typically do not dissolve in water, instead making a separate layer on the water's surface. Sugar is one of the few carbon compounds that dissolves in water because it is a polar covalent compound (parts of their molecules have a negative side and a positive side), but it still does not separate into ions the way ionic compounds do in water.

The figures below show how the melting point (Fig. 1.2) and electrical conductivity (Fig. 1.3) of carbon varies as compared to the other elements in Period 2 of the Periodic Table.

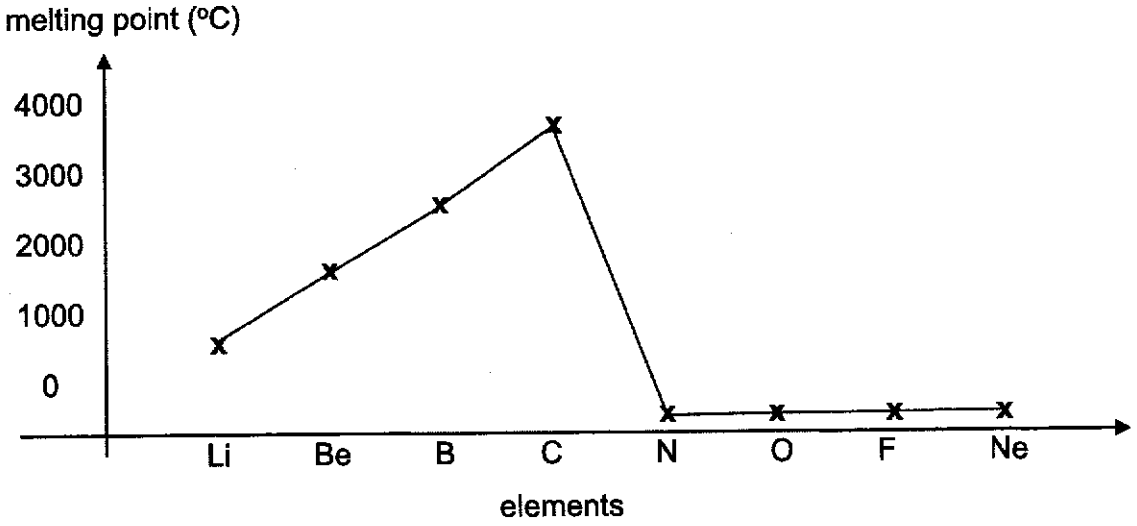

Fig. 1.2

element	Li	Be	B	C	N	O	F	Ne
electrical conductivity (at room temperature and pressure)	good	good	poor	good	does not conduct

3 Many daily products contain dissolved chemicals. These chemicals can be harmful when present in high concentrations. For example, too much ammonia in floor cleaners can cause skin irritation. Chemists can check the concentration of these substances by carrying out volumetric analysis (titration).

One such common laboratory experiment would be the neutralisation reaction between sodium hydroxide and sulfuric acid. The equation of the reaction is as follows:

$$2\ NaOH\ (aq) + H_2SO_4\ (aq) \rightarrow Na_2SO_4\ (aq) + H_2O\ (l)$$

(a) Write the ionic equation for this neutralisation reaction.

..... [1]

(b) A student wanted to conduct titration to find out the volume of sulfuric acid needed to neutralise the sodium hydroxide.

She measured exactly 25.0 cm^3 of sodium hydroxide.
One of the titration readings for sulfuric acid was 27.40 cm^3.

Suggest suitable apparatus to measure the volumes of sodium hydroxide and sulfuric acid in this titration experiment.

Sodium hydroxide: .....

Sulfuric acid: ..... [1]

(c) The student carried out four titrations to find out the volume of 0.100 mol/dm^3 sulfuric acid needed to neutralise the sodium hydroxide of unknown concentration. Her results are shown in the table below.

titration	1	2	3	4
volume of sulfuric acid (cm^3)	27.40	28.15	27.05	27.15

..... [1]

(ii) The table below shows some information about different types of solutions and their nature.

type of solution	acidic	neutral	alkaline
pH value	less than 7	exactly 7	more than 7
colour in indicator	red	green	blue

Given that sodium hydroxide is alkaline and the products formed in the titration reaction are neutral, suggest the colour change that happens in the conical flask, upon neutralisation.

3 Nitrogen is an unreactive element as it requires a huge amount of energy to break the nitrogen bonds. During a thunderstorm, the energy from the lightning can be used to chemically combine nitrogen and oxygen to form oxides of nitrogen. These several nitrogen oxides have different formulae and properties.

(a) Draw the electronic configuration of nitrogen molecule. Show only valence electrons.

[2]

(b) Using bonding and structure, explain why nitrogen exists as a gas in room temperature and pressure.

.....

.....

..... [2]

(c) The table below shows data from experiments to analyse the mass of nitrogen and oxygen in two samples of oxides. [4]

PartnerInLearning
More papers at www.testpapersfree.com

Downloaded from SingaKids.com

	mass of nitrogen (g)	mass of oxygen (g)
oxide 1	0.35	0.78
oxide 2	0.35	1.63

Using the above data, find the empirical formulae of both oxides and show that they are the same.

(d) Further experiments showed that oxide 1 has a molecular mass of 46 and oxide 2 has a molecular mass of 92. Find the **molecular formulae** of the two oxides.

– END OF BOOKLET B –

The volume of any gas is 24 dm^3 at room temperature and pressure (r.t.p.).

6092 Chemistry Mid-Year Exam 2019 Marking Scheme

SECTION A: MULTIPLE CHOICE QUESTIONS [30 MARKS]

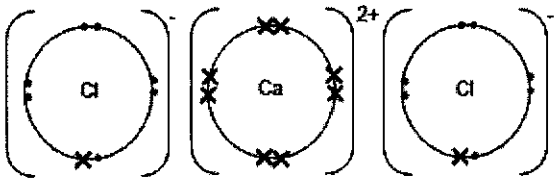

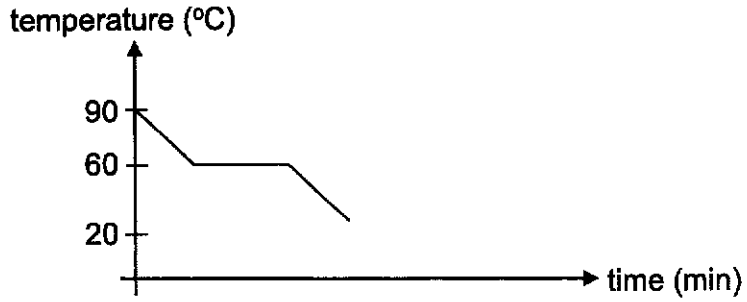

1	2	3	4	5	6	7	8	9	10
B	C	C	B	D	A	D	D	A	B
11	12	13	14	15	16	17	18	19	20
D	C	B	B	A	D	C	C	A	A
21	22	23	24	25	26	27	28	29	30
B	A	A	C	A	C	C	D	D	D

SECTION B: SHORT-STRUCTURED QUESTIONS [40 MARKS]

1a	X. Solvent front travels a greater distance due to pull of gravity.	1
bi	Rf of blue dye = 2.5 / 8 = 0.3125 = 0.3 (1dp) Rf of yellow dye = 5 / 8 = 0.625 = 0.6 (1dp)	1 1
bii	 Diagram III 0.3 = Blue / 6 Blue = 1.9 cm 0.6 = yellow / 6 Blue = 3.6 cm	Correct distance and labelled 1m Allow ecf from bi
c	Descending method. For the same duration of time, the dyes travel further / faster from the starting line. Or dyes do not overlap and can be distinguished clearly. Award 1 mark when reason is correct.	1
d	To make colourless spots visible.	1
2(a)	Atoms of the same element with same number of protons and electrons but different number of neutrons.	1
(b)	3 isotopes	1
(c)(i)	24	1
(c)(ii)	Magnesium/Mg	1

(d)	Average relative mass $= \frac{78.99}{100} \times 24 + \frac{10.00}{100} \times 25 + \frac{11.01}{100} \times 26$ = 18.9576 + 2.5 + 2.8626 = 24.3202 = 24.3 (3sf)	1 mark for working 1 mark for 3sf ans
3(a)		1 mark for correct number of electrons transferred in all ion 1 mark for correct number of electrons in all ions
(b)(i)	The value of the lattice energy increases as the charges of the ions increase. OR The value of the lattice energy decreases as the charges of the ions decrease.	1
(b)(ii)	As the charges of the ions increase, the electrostatic attraction between the ions also increases/gets stronger. It would take more energy to overcome the electrostatic forces of attraction/break up the ionic lattice structure.	1 mark for the relationship 1 mark for explanation
4(a)(i)	Liquid	1
(a)(ii)	YCl_2 is a covalent compound because it has a low melting and boiling point.	1 1
(b)		1 mark for correct curve with one plateau 1 mark for correct labelling of all three temperatures
(c)	An inverted filter funnel is placed over the gaseous compound. As the solid mixture sublimes and the gas/vapour touches the cool surface of the filter funnel, it will turn into solid again.	1 mark for showing ideas of sublimation mentioning heating and cooling

5(a)	Iron is held by strong metallic bonds between iron metal ions and a sea of delocalized electrons in a giant metallic structure. The delocalized electrons move freely within the structure to act as charge carriers to conduct electricity.	1 1
(b)	In solid common salt, sodium and chloride ions are held in fixed positions in a giant lattice structure. Hence there are no mobile ions to act as charge carriers to conduct electricity.	1 1
(c)	Melt the table salt. Dissolve the solid in a beaker of water.	1 1
6(a)	No. of moles of COS used = 6 ÷ 24 = 0.250	1
(b)	No. of moles of O_2 used = 18 ÷ 24 = 0.750	1
(c)	2COS: $3O_2$ If O_2 is LR, no. of moles of COS needed = 2/3 x 0.750 = 0.500 If COS is LR, no. of moles of O_2 needed = 3/2 x 0.250 = 0.375 Thus, carbonyl sulfide is limiting.	 1 1
(d)	No. of moles of O_2 left = 0.750 – 0.375 = 0.375 No. of moles of gases formed = 2 x 0.250 = 0.50 No. of moles of gases at the end = 0.50 + 0. 375 = 0.875 Volume of gases at the end = 0.875 x 24.0 = 21.0 dm^3	 1 1 1
7(a)	$H_2SO_4 + CuCO_3 \rightarrow CuSO_4 + H_2O + CO_2$	1
(b)	No. of mole of CO_2 produced = (165.00 – 164.86) / 44 = 0.003182 mol (4sf) Mass of pure $CuCO_3$ = 0.003182 x 124 = 0.3946 g Percentage purity = 0.3946 / 0.50 x 100 = 78.9 %	1 1 1
