RAFFLES GIRLS' PRIMARY SCHOOL

END-OF-YEAR EXAMINATION 2020

Section A	/56
Section B	/44
Your score out of 100	
Parent's signature	

Name : _____ Index No.: ____ Class: P5___

28 October 2020 **SCIENCE** **Duration: 1 h 45 min**

SECTION A (28 x 2 marks)

For each question from 1 to 28, four options are given. One of them is the correct answer. Make your choice (1, 2, 3 or 4). Shade the correct oval (1, 2, 3 or 4) on the Optical Answer Sheet (OAS) provided.

1. The characteristics of organisms A and B are shown in the table below.

Characteristic	Organism	
	A	B
Has spores	Yes	Yes
Makes its own food	No	Yes

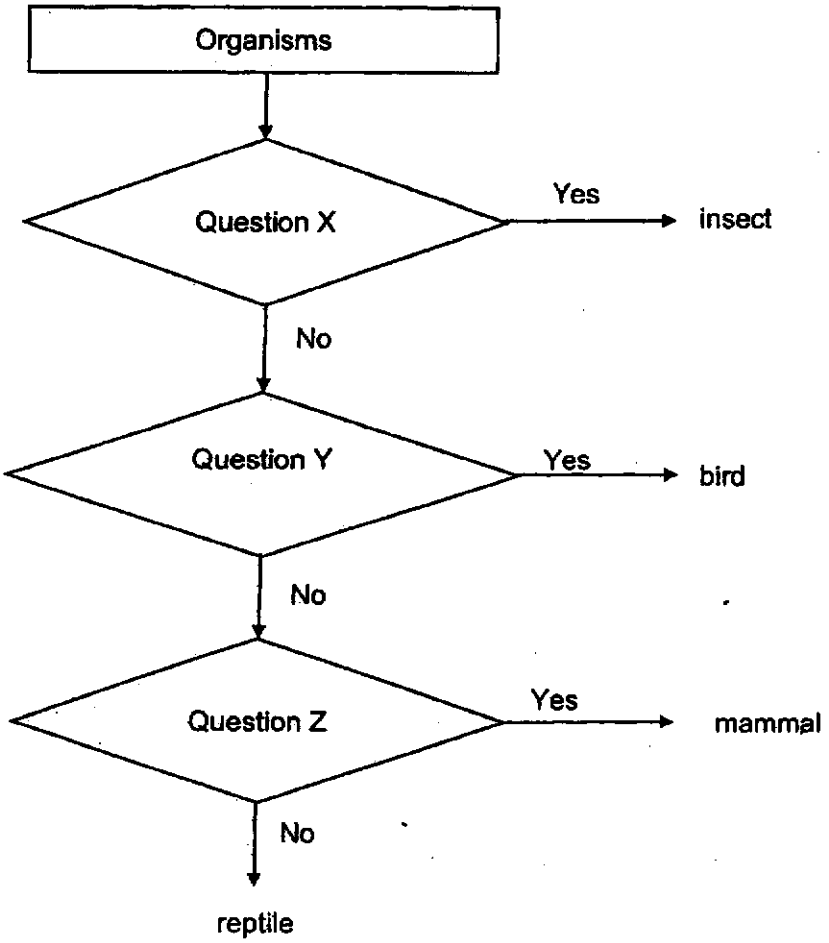

Which of the following organisms are A and B?

	A	B
(1)	fern	mushroom
(2)	moss	tomato plant
(3)	mushroom	fern
(4)	tomato plant	moss

www.testpapersfree.com

Downloaded from SingaKids.com

2. The flow chart below shows how organisms A, B, C and D are grouped.

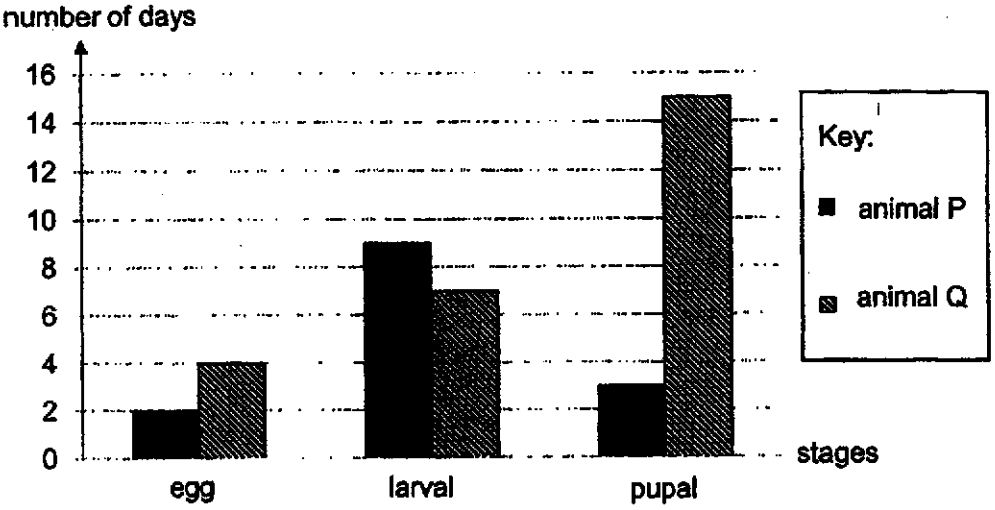

Which of the following is correct?

	Question X	Question Y	Question Z
(1)	Does it have hard outer covering?	Does it have a beak?	Does it lay eggs?
(2)	Does it have wings?	Does it have hard outer covering?	Does it lay eggs?
(3)	Does it have feathers?	Does it have wings?	Does it give birth to young alive?
(4)	Does it have six legs?	Does it have feathers?	Does it give birth to young alive?

www.testpapersfree.com

Downloaded from SingaKids.com

3. The graph below shows the number of days spent in each stage of life cycle of animals P and Q.

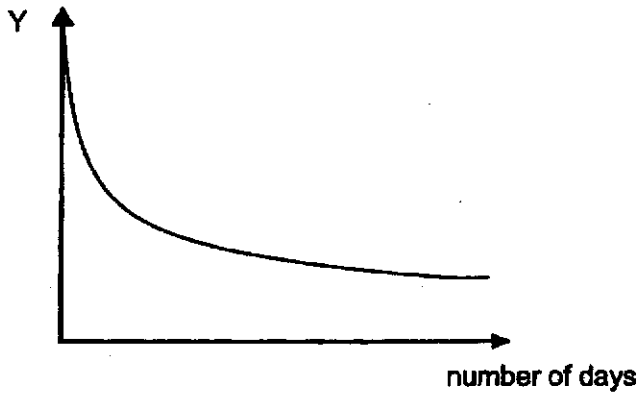

Based on the graph above, on which day will animals P and Q start the stage where they feed the most respectively?

	Animal P	Animal Q
(1)	2nd day	4th day
(2)	3rd day	5th day
(3)	8th day	7th day
(4)	12th day	8th day

www.testpapersfree.com

Downloaded from SingaKids.com

4. Study the graph below on the change observed during seed germination.

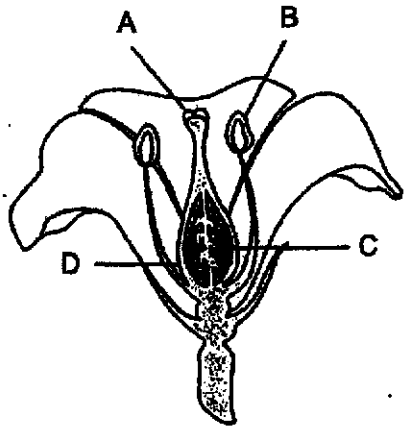

What could Y represent?

(1) Mass of the seedling
(2) Height of the seedling
(3) Mass of the seed leaf
(4) Length of the roots

www.testpapersfree.com

Downloaded from SingaKids.com

5. Lucy conducted an experiment using two insect-pollinated flowers, X and Y, from the same plant. The diagram below shows the cross-section of one of the flowers. A, B, C and D are parts of the flower.

cross-section of the flower

She removed a part from flower X and another part from flower Y. She observed the development of the flower over time and recorded it in the table below.

Flower	Development of fruit
X	yes
Y	no

Which of the following shows the parts removed from the flowers?

	Flower X	Flower Y
(1)	A	B
(2)	C	D
(3)	C	B
(4)	B	D

www.testpapersfree.com

Downloaded from SingaKids.com

6. Diagram 1 below shows the distribution of the plants C, D and E on a piece of land.

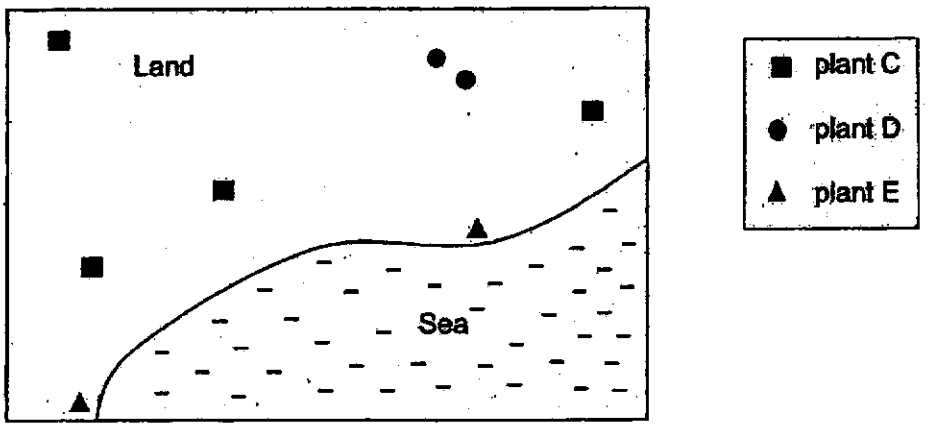

Diagram 1

Diagram 2 below shows the number of plants on the same piece of land after one year.

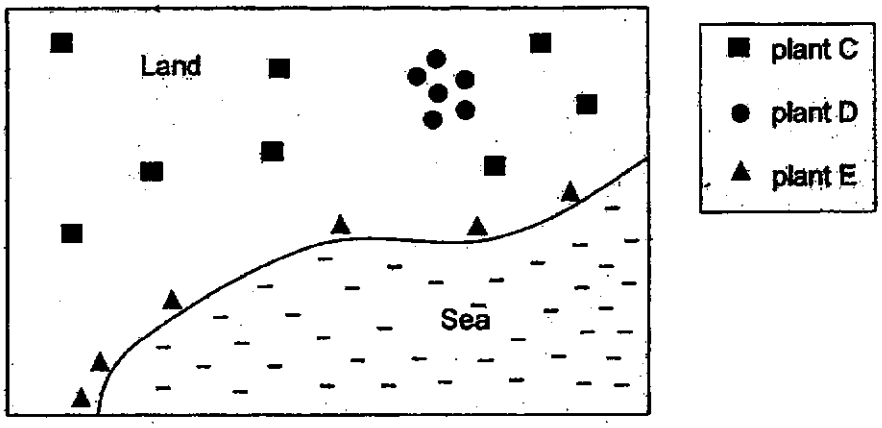

Diagram 2

Which of the following shows the correct methods of seeds dispersal for plants C, D and E?

	Plant C	Plant D	Plant E
(1)	splitting	animals	wind
(2)	wind	water	animals
(3)	animals	splitting	water
(4)	water	wind	splitting

www.testpapersfree.com

Downloaded from SingaKids.com

7. The diagram below shows a plant growing in the soil.

Based on the observation above, which of the following statement(s) about the plant is/are correct?

A It has a weak stem.
B It can make its own food.
C It reproduces by spores.

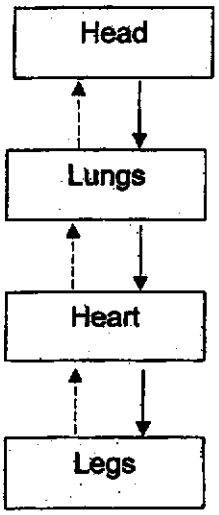

(1) B only
(2) A and B only
(3) A and C only
(4) A, B and C

www.testpapersfree.com

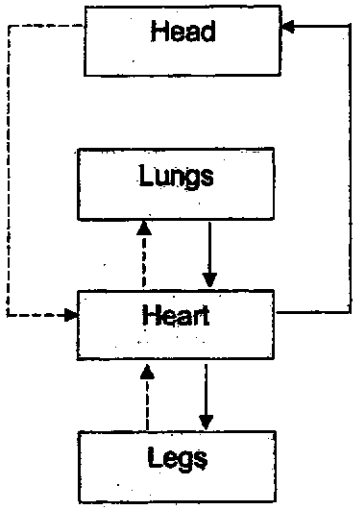

Downloaded from SingaKids.com

8. Which of the following correctly represents the direction of blood flow to certain parts of the human body?

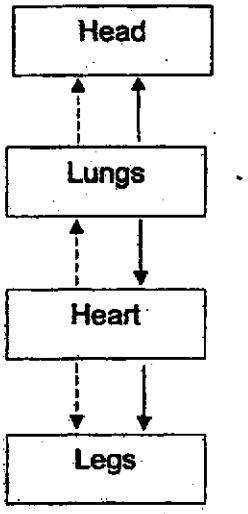

(1)

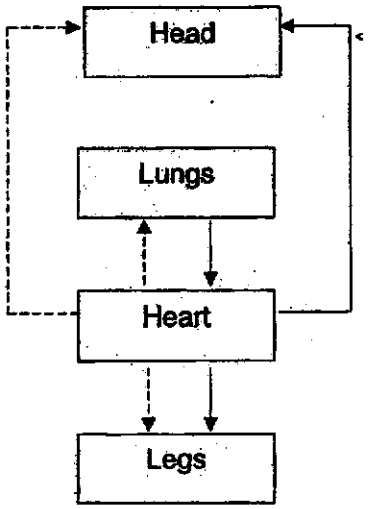

(2)

(3)

(4)

Key:

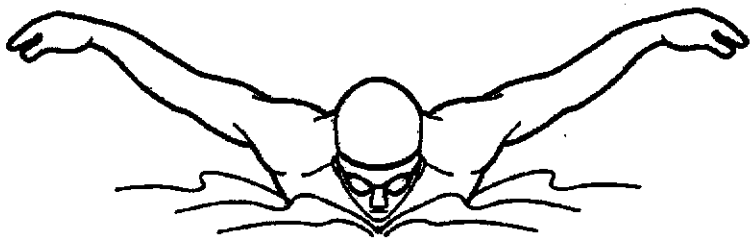

——→ oxygen-rich blood

- - - - - - → carbon dioxide-rich blood

www.testpapersfree.com

9. The diagram below shows a person swimming in the pool.

Which of the following shows the systems required to work together to enable him to swim?

	Systems				
	Digestive	**Circulatory**	**Respiratory**	**Muscular**	**Skeletal**
(1)				√	√
(2)		√	√		√
(3)	√		√		√
(4)	√	√	√	√	√

10. The table below shows the presence of the part(s) in three cells, X, Y and Z indicated by the tick (√).

Part	X	Y	Z
Nucleus	√	√	
Cytoplasm	√	√	√
Chloroplast			
Cell wall	√		
Cell membrane	√	√	√

Which of the following is/are animal cells?

(1) X only
(2) Y only
(3) Y and Z only
(4) X, Y and Z only

www.testpapersfree.com

Downloaded from SingaKids.com

11. Which of the following statements state the difference between the inhaled and exhaled air from a human at room temperature correctly?

A Inhaled air is cooler than exhaled air.
B Exhaled air has less oxygen than inhaled air.
C Inhaled air has less water vapour than exhaled air.
D Exhaled air has more dust particles than inhaled air.

(1) A and C only
(2) B and D only
(3) A, B and C only
(4) B, C and D only

12. Mei Yee conducted an experiment to find out the rate of heartbeats in three different animals P, Q and R. She used a live and dead specimens of each animal in her investigation. Then she recorded her findings in the table below.

Animals	P	P	Q	Q	R	R
Live or Dead	Live	Dead	Live	Dead	Live	Dead
Mass (kg)	1	1	5	5	90	90
Number of heartbeats per minute	205	0	192	0	60	0

Based on her findings, which of the following statements are true?

A There is no heartbeat in a dead animal.
B Live animal P has the greatest number of heartbeats per minute.
C The greater the mass of a live animal, the fewer the number of heartbeats per minute.

(1) A only
(2) A and C only
(3) B and C only
(4) A, B and C

www.testpapersfree.com

Downloaded from SingaKids.com

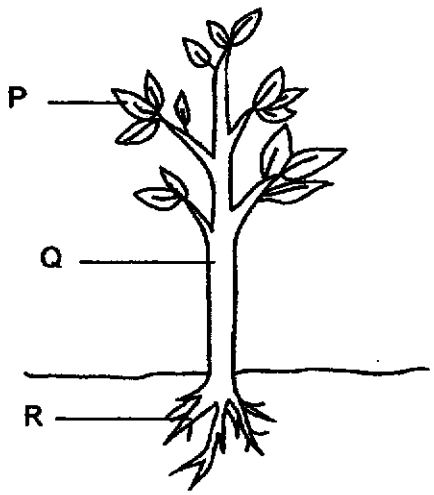

13. The following table compares the human circulatory system and the plant transport system.

	Plant transport system	Human circulatory system
A	The water transport system extend from the roots to the other parts of the plant.	The circulatory system involves the heart pumping blood to the different parts of the body.
B	Oxygen is taken in through the chloroplasts.	Gaseous exchange occurs in the lungs.
C	Food is transported from the leaves to the rest of the plant by the food-carrying tubes.	The blood vessels transport oxygen-rich blood, digested food and water to the rest of the body.

Which of the following statements are correct?

(1) A only
(2) B only
(3) A and C only
(4) B and C only

14. The diagram shows parts of a plant P, Q and R.

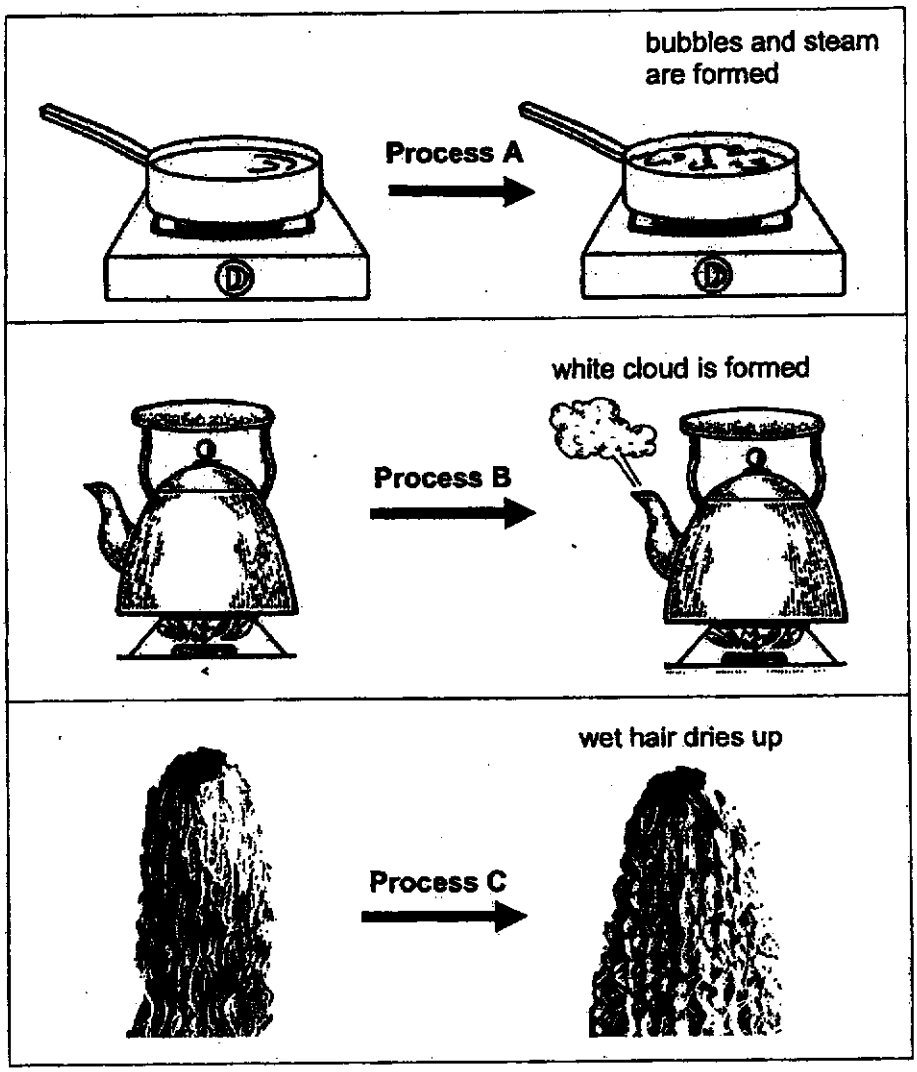

Which of the following part(s) of the plant contain(s) water-carrying tubes?

(1) R only
(2) P and Q only
(3) Q and R only
(4) P, Q and R

www.testpapersfree.com

Downloaded from SingaKids.com

15. The diagrams below show some processes involved when water changes from one state to another.

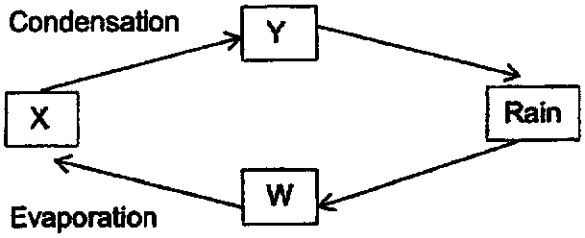

What are processes A, B and C?

	Process A	Process B	Process C
(1)	Boiling	Condensation	Evaporation
(2)	Evaporation	Condensation	Boiling
(3)	Condensation	Boiling	Evaporation
(4)	Evaporation	Melting	Boiling

www.testpapersfree.com

Downloaded from SingaKids.com

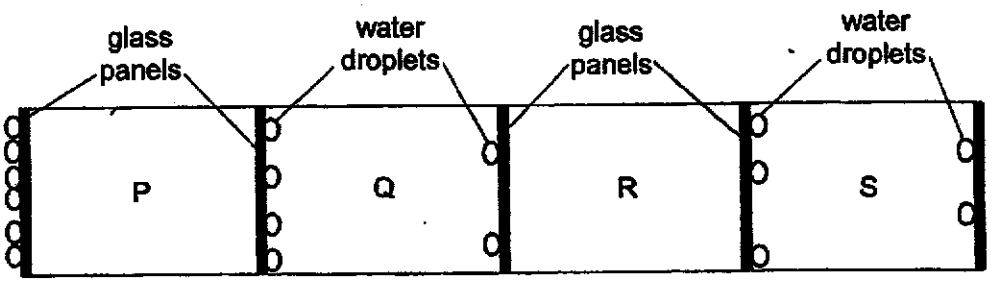

16. The diagram below shows the water cycle. The arrows represent different processes in a water cycle.

At which stage(s), W, X or Y, in the water cycle, is water in the liquid state?

(1) W only
(2) X only
(3) W and Y only
(4) X and Y only

17. Four rooms, P, Q, R and S, were separated by glass panels. Water droplets appeared on the different sides of the glass panels as shown in the diagram below.

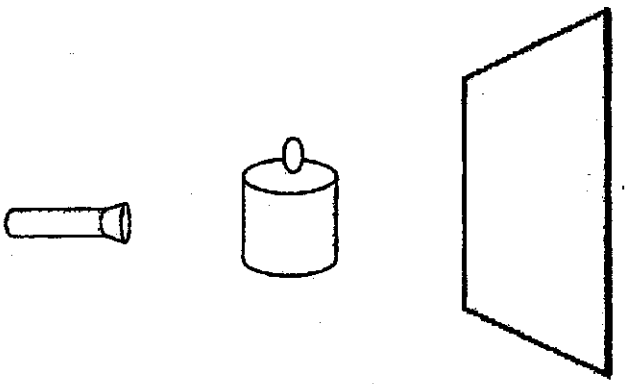

In which room was the temperature the lowest?

(1) Room P
(2) Room Q
(3) Room R
(4) Room S

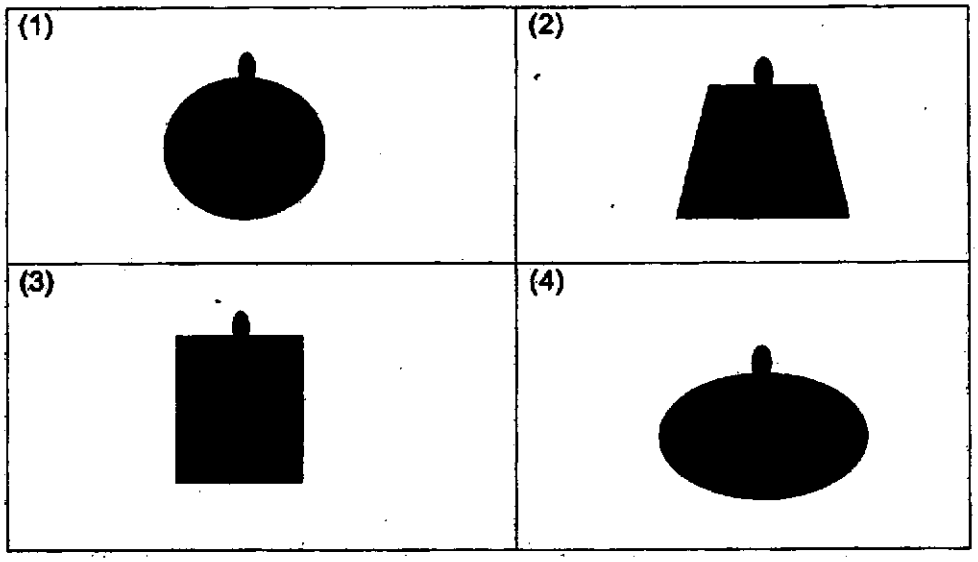

www.testpapersfree.com
Downloaded from SingaKids.com

18. Azlin shines a torch on the metal container as shown below.

torch metal container screen

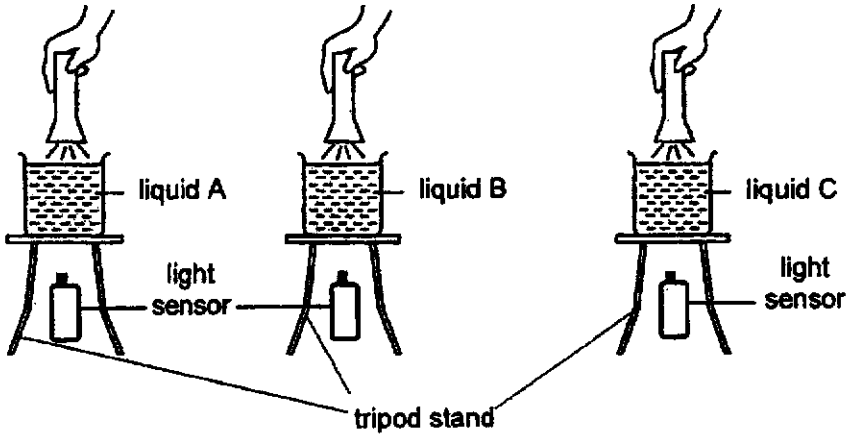

Which one of the following shows the shadow of the metal container cast on the screen?

www.testpapersfree.com

Downloaded from SingaKids.com

19. Siti placed 200 ml of different liquids, A, B and C, in three identical beakers. She then placed each beaker on identical tripod stands and shone the identical torch through each of them.

She recorded the amount of light detected by the light sensor in the table below:

Amount of light (lux)		
Liquid A	**Liquid B**	**Liquid C**
100	500	0

Based on the above results, arrange the liquids A, B and C starting with the one that allows most light to pass through.

(1) liquid B — liquid A — liquid C
most light can pass through — *least light can pass through*

(2) liquid B — liquid C — liquid A
most light can pass through — *least light can pass through*

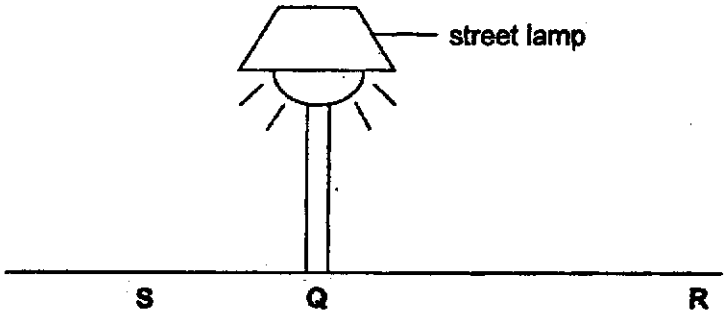

(3) liquid C — liquid A — liquid B
most light can pass through — *least light can pass through*

(4) liquid C — liquid B — liquid A
most light can pass through — *least light can pass through*

21. Four pans of the same size are shown below.

Which two pans can be used to show that steel is a better conductor of heat?

(1) A and B

(2) A and C

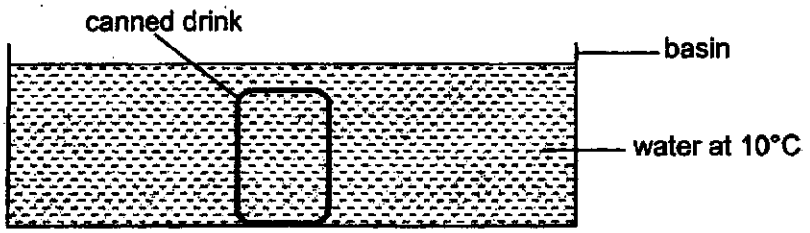

(3) B and C

(4) C and D

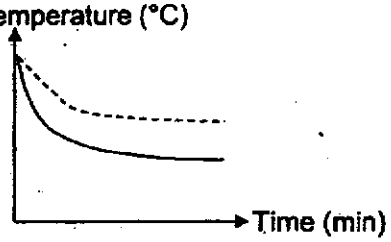

www.testpapersfree.com

Downloaded from SingaKids.com

22. A canned drink, at room temperature, is placed into a basin of water at 10°C as shown below.

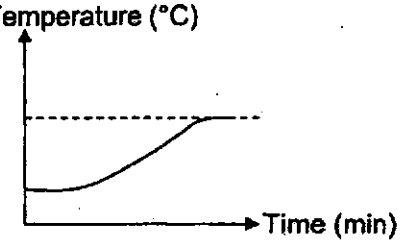

Which of the following graphs represent the changes in the temperatures of the liquids in the basin and in the can?

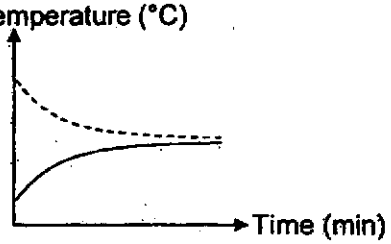

(1)

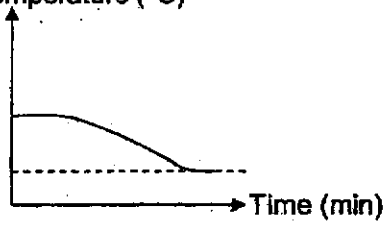

Key:

water in the basin ——————

canned drink - - - - - - - - - - - -

(2)

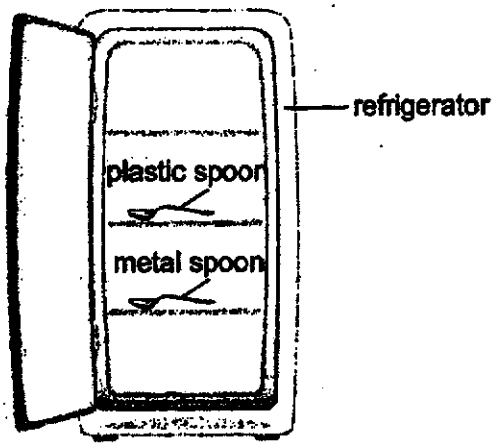

(3)

(4)

www.testpapersfree.com

Downloaded from SingaKids.com

23. Jill placed a plastic spoon and a metal spoon in a refrigerator overnight. When she removed both spoons at the same time, the metal spoon felt colder than the plastic spoon.

Which of the following explains why her hands felt that the metal spoon was colder than the plastic spoon?

A The temperature of the metal spoon was lower than the plastic spoon.

B Jill's hand lost heat to the metal spoon more quickly than to the plastic spoon.

C The heat from the plastic spoon was conducted to Jill's hand more quickly.

(1) B only

(2) A and B only

(3) B and C only

(4) A, B and C

www.testpapersfree.com

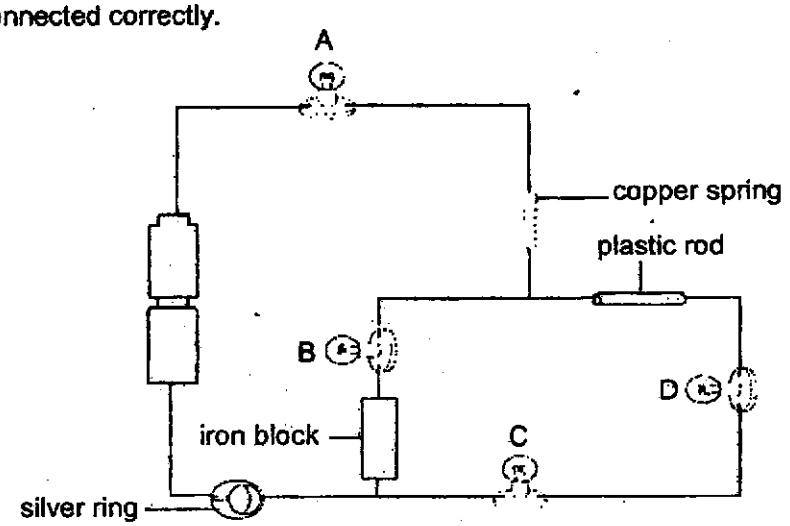

Downloaded from SingaKids.com

24. Don wanted to find out how the arrangement of bulbs in a circuit affects the brightness of the bulbs. Which variables should he keep the same for a fair experiment?

A Number of bulbs
B Brightness of bulbs
C Number of batteries
D Arrangement of bulbs

(1) A and C only
(2) B and D only
(3) A, C and D only
(4) A, B, C and D

25. The diagram below shows four bulbs, A, B, C and D, in a circuit that is connected correctly.

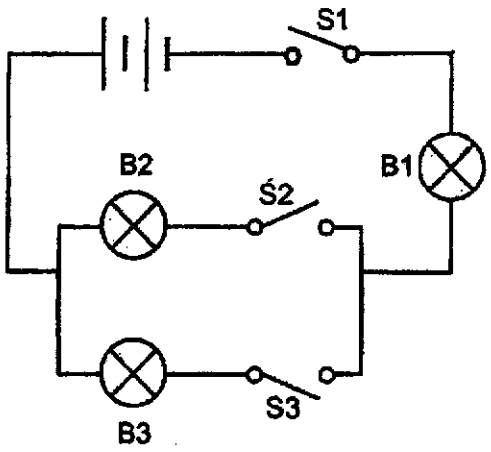

Which of the following bulbs will **not** light up?

(1) A and B only
(2) C and D only
(3) A, C, D only
(4) A, B, C and D

www.testpapersfree.com
Downloaded from SingaKids.com

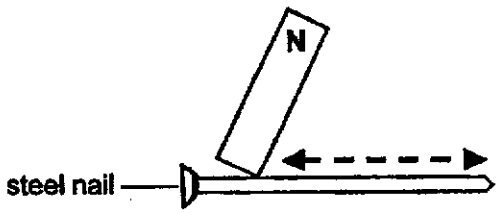

26. Identical batteries and bulbs are used to set up the circuit below.

Which one of the following statements about the circuit is correct?

(1) B1 will light up when either B2 or B3 is lighted.
(2) At least one bulb will light up when only S1 is closed.
(3) Electricity will flow through the circuit as long as one switch is closed.
(4) Electricity will flow through the circuit only when all the switches are closed.

27. June was trying to make a temporary magnet with a steel nail. She held a magnet on the N-pole and moved it up and down along the nail as shown by the arrows below.

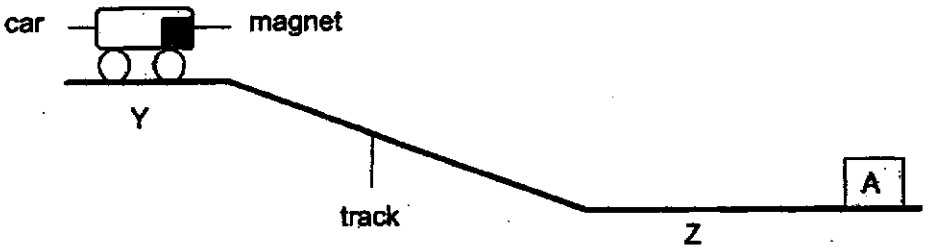

When she placed the steel nail near some pins, nothing happens.
What could be the reason?

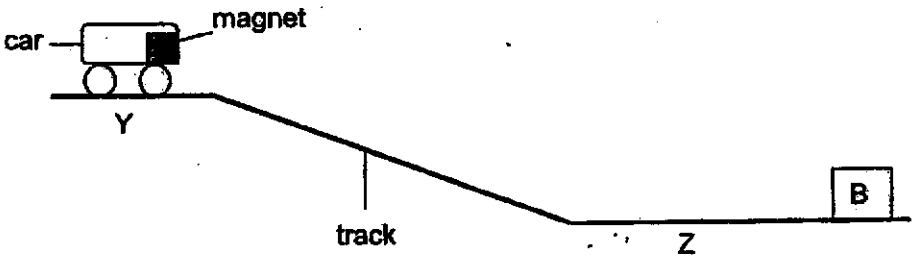

(1) She used electricity to make the magnet.
(2) She used a nail made of non-magnetic material.
(3) She used the wrong pole of the magnet to stroke the nail.
(4) She did not stroke the steel nail repeatedly in one direction.

www.testpapersfree.com
Downloaded from SingaKids.com

28. Rina set up an experiment as shown below. When she released the car from Y, the car travelled down the track and then moved a short distance backwards before stopping at Z. The car did not touch object A at the end of the track.

When she placed object B at the end of the track and released the car from Y, the car moved towards object B and was attached to it.

Based on the information above, what could objects A and B possibly be?

	A	B
(1)	iron block	plastic block
(2)	bar magnet	steel block
(3)	wooden block	iron block
(4)	electromagnet	copper block

44

SECTION B (44 marks)

For questions 29 to 41, write your answers clearly in the spaces provided.
The number of marks is shown in brackets [ ] at the end of each question or part question.

29. The diagram below shows the various stages of process R taking place in the life cycle of a plant.

(a) Name process R. [1]

_____

(b) Arrange the stages in the correct order of growth. [1]

_____, _____, _____, _____

(c) Put a tick (√) in the boxes below for all the conditions needed for process R to take place. [1]

Conditions	tick (√)
water	
sunlight	
air	
warmth

Cheryl prepared two identical plates containing an equal number of seeds. Each plate had an equal amount of cotton wool. The cotton wool in set-up Y was damp while the one in set-up Z was dry as shown in the diagrams below. Only set-up Y was watered daily.

Cheryl placed both set-ups, Y and Z, in an enclosed cupboard for three weeks.

After three weeks, Cheryl noticed that young seedlings which developed in only one of the set-ups had died.

(d) In which set-up did the young seedlings die at the end of the experiment? Explain your answer. [2]

30. Emily found a flower of plant M. She noticed that the reproductive parts of the flower were hidden in the flower as shown below.

flower of plant M

(a) In what way is this flower most likely to be pollinated by? [1]

_____

(b) She recorded her observations based on four characteristics of the flower of plant M in a table.

Circle the characteristics most likely to be present in the flower of plant M. [2]

	Characteristics	
Colour of flower	bright and colourful	dull and white
Size of petals	small	large
Smell of flower	no smell	strong smell
Texture of stigma	feathery	sticky

Q29)

a)Germination

b)D, A, C , B

c)water , air , warmth

d)Set-up Y. The young seedlings with leaves did not receive light as they were placed in an enclosed cupboard. Hence they were not able to make their own food.

Q30)

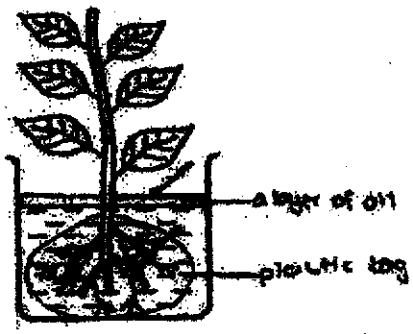

a)Insects

b)

Bright and colourful	
	large
	strong smell
	sticky

www.testpapersfree.com

Downloaded from SingaKids.com

Q31)	a)  b)To compare and confirm ensure that any change in the water level is solely only due to the presents of roots absorbing, taking in the water.
Q32)	a)D b)i)break down the food into simpler substances ii)Pump Hood which contains digested food and oxygen around the body for respiration.
Q33)	a) Cell S has nucleus while Cell Q has no nucleus. b)Cell R. Although Cell R has cell wall like a plant cell, it does not have chloroplasts to trap light to make food like the leaf cells. c)Cell S contains chloroplasts which plants need in order to trap light to make food for the plant without cell S, the plant will die for a lack of food.
Q34)	a) C b)In parts A and C, the heart pumps faster to transport more oxygen to pump blood rich in oxygen faster and digested food to the other parts of the body to produce more energy needed for running.
Q35)	a)i) gills ii)lungs

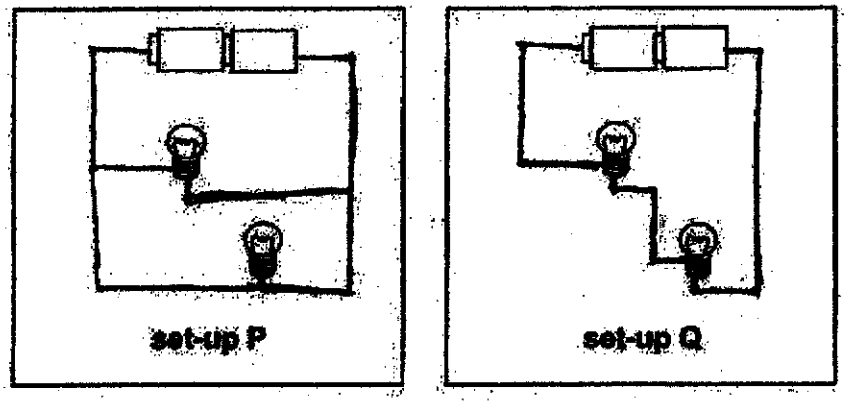

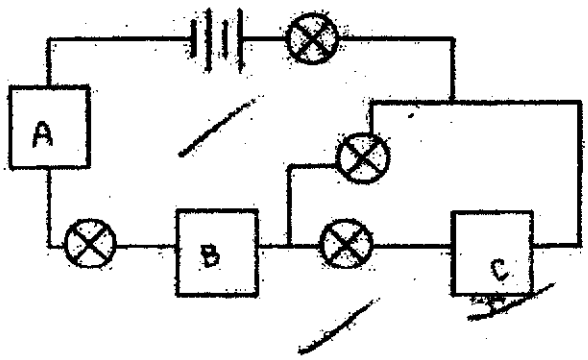

www.testpapersfree.com

Downloaded from SingaKids.com

	b)When the gills comes into contact with water, it will fan out to increase the exposed surface area of the gills with the water to increase the amount of oxygen absorbed into the bloodstream.
Q36)	a)leaf b)A: water and dissolved mineral salts B: food glucose
Q37)	a)Part A. The water carrying tubes below A were removed water which is needed be the leaf to make food was not able to be transported from the roots to the leaves beyond A. The leaves above A were not able to make food and hence the leaves dies. b) 
Q38)	a)The warmer water vapour from the surrounding air came into contact with the cooler air that came out from the freezer, lost water droplets. b)The mist gained heat from the surrounding air evaporated into water vapour. c)The plastic cylinder surrounding the ice cream is a poor conductor of heat, slowing down heat transferred, conducted from the surrounding air to the ice cream, hence causing the ice cream to melt slower from the ice cream exposed to the surrounding air.
Q39)	a)As the protective layers on the shield were not removed ,less light that reflects off the words was able to pass through the translucent shield to enter his eyes,causing him not able to see the words clearly. b)Plastic is a bad conductor of heat so it will conduct heat from his face to the surrounding air slower. c)Light from the computer shone into his eyes, allowing him to see the computer screen.

www.testpapersfree.com

Downloaded from SingaKids.com

Q40)	a)  b)i)Object C is insulator of electricity and electricity must pass through Object C to light up any one of the bulbs, hence there will be a gap in the circuit causing an open circuit and the bulbs will not light up. ii) 
Q41)	a)A magnet. b)Like poles of the magnet and the magnet plate inside the base each other, the will repel, causing the potted plant to float. c)Add more batteries to the power source.
