17 A container measuring 25 cm by 20 cm by 48 cm was $\frac{1}{3}$-filled with water at first. After Daniel poured some water into the container, the height of the water in the container became 20 cm as shown below.

(a) How much water did Daniel pour into the container?

25 × 20 × 4 = 2000

Ans: (a) 20 000 cm³ [2]

(b) Daniel used several identical bottles to fill the container with water to the brim. The capacity of each bottle was 0.5 ℓ. How many of such identical bottles is needed to fill the container with water to the brim?

48 − 20 = 28

25 × 20 × 28 = 14000

0.5 × 1000 = 500

14000 ÷ 500 = 28

Ans: (b) 28 [3]
