3 Read all the instructions carefully before starting the experiments in Question **3**.

(a) You are provided with two samples of **R** and a sample of solution **S**.

Carry out the following tests and record your observations in the table.
You should test and name any gas evolved.

Test No.	Test	Observations
1	Remove the stopper from a sample of **R** in a test-tube. Heat the solid in the test-tube gently at first and then strongly. Leave it to cool. You do not need to test for any gas evolved.	
2	Transfer the other provided sample of solid **R** to a boiling tube. Carefully add hydrochloric acid to a depth of approximately 5 cm. Test any gases given off. Keep this solution for Test 3 and 4.	
3	Add 1 cm depth of the solution from Test **2** into a test-tube. Add aqueous sodium hydroxide slowly with shaking until no further change is seen.	
4	Add 1 cm depth of the solution from Test **2** into a test-tube. Add aqueous ammonia slowly with shaking until no further change is seen.	
5	To 1 cm depth of **S** in a test-tube, add aqueous sodium hydroxide until no further change is seen. Allow the final mixture to stand for a few minutes.

6	(a) To 1 cm depth of **S** in a test-tube, add an equal volume of aqueous hydrogen peroxide. (b) Pour the mixture from (a) into a boiling tube and then add aqueous sodium hydroxide.	
7	(a) To 1 cm depth of **S** in a test-tube, add an equal volume of aqueous barium nitrate. (b) Add dilute nitric acid to the mixture from (a).	
8	To 1 cm depth of acidified potassium manganate (VII) in test-tube, add an equal volume of **S**.
