10(a)	Amount paid before GST $= \frac{(737+692+749)}{3} \times 0.2989$ $= 726 \times 0.2989$ $= \$217$	M1 A1	
(b)	$9 \div 1.65 \approx 5$ $4 \div 1 = 4$ $5 \times 4 = 20$	M1 A1	
(c)	Average amount of electricity produced = 20 x 19 = 380 kWh	P1	
	Average cost per month after solar energy savings = (726-380) x \$0.2989 =\$103.42	C1	
	Average cost of installing & maintenance of solar panel per month $= (2 \times \$5950 + 20 \times \$500) \div (20 \times 12)$ $= \$91.25$	I1	
	Total average amount paid per month after installation =\$103.42 + \$91.25 =\$194.67 (< \$217)	T1	
	Since the average amount paid by Mr Faizal after installing the solar panels is less than what he is currently paying, he should proceed with the installation.	A1	Conclusion
	Assumption: The average electricity consumption remains the same, The price of tariff did not increase.	A1	Either one

Method 2 (Total cost based on 20 years)

(c)	Average amount of electricity produced = 20 x 19 = 380 kWh	P1
	Cost for 20 years before installation = \$217x20x12= \$52080	C1
	Cost of installation & maintenance $= (2 \times \$5950 + 20 \times \$500)$ =\$21900	I1
	Total cost for 20 years after installation =(726-380) x \$0.2989x12x20 +21900 = 46720.66 < \$52080	T1
	Since the total amount paid by Mr Faizal after installing the solar panels is less than what he is currently paying, he should proceed with the installation.	A1
